Exam 2 Practice Problems
Chem 60 (Chapters 5 \& 6)
This is NOT a comprehensive study guide for the exam, but includes some topics you may need to review.

1. Complete the following table and show your work below.

| Mass solute | Volume solution | Concentration \%(w/v) |
| :--- | :--- | :--- |
| 15.5 g | 253.6 mL |  |
|  | 22.8 mL | $12.0 \%$ |
| 183.3 g |  | $6.25 \%$ |

2. Complete the following table and show your work below.

| Solute | Mass Solute | Moles Solute | Volume <br> Solution | Molarity |
| :--- | :--- | :--- | :--- | :--- |
| $\mathrm{KNO}_{3}$ | 22.5 g |  | 125.0 mL |  |
| $\mathrm{NaHCO}_{3}$ |  |  | 250.0 mL | 0.100 M |
| $\mathrm{CH}_{3} \mathrm{OH}$ | 12.5 g |  |  | 0.500 M |

5. How many grams of $\mathrm{K}_{2} \mathrm{CO}_{3}$ are in 750 mL of a $3.5 \%(\mathrm{w} / \mathrm{v}) \mathrm{K}_{2} \mathrm{CO}_{3}$ solution?
6. A 158 mL sample of a $1.2 \mathrm{~mol} / \mathrm{L}$ sucrose solution is diluted to 500.0 mL . What is the molarity of the diluted solution?
7. How many L of a $3.0 \mathrm{~mol} / \mathrm{L}$ solution of NaCl are needed to make 15.0 L of $0.15 \mathrm{~mol} / \mathrm{L}$ saline?
8. Balance the following reactions:
a) __ $\mathrm{Li}_{2} \mathrm{O}(\mathrm{s})+\ldots \mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow \ldots \mathrm{LiOH}(\mathrm{aq})$
b) $\ldots \mathrm{MnO}_{2}(\mathrm{~s})+\ldots \ldots \mathrm{HCl}(\mathrm{aq}) \rightarrow \ldots \mathrm{Cl}_{2}(\mathrm{~g})+\ldots \ldots \mathrm{MnCl}_{2}(\mathrm{aq})+\ldots \ldots \mathrm{H}_{2} \mathrm{O}(\mathrm{l})$
c) $\ldots_{\_} \mathrm{CO}_{2}(\mathrm{~g})+\ldots \mathrm{CaSiO}_{3}(\mathrm{~s})+\ldots \ldots \mathrm{H}_{2} \mathrm{O}(\mathrm{l}) \rightarrow \ldots \mathrm{SiO}_{2}(\mathrm{~s})+\ldots \ldots \mathrm{Ca}\left(\mathrm{HCO}_{3}\right)_{2}(\mathrm{aq})$
d) $\mathrm{Fe}(\mathrm{s})+$ $\qquad$ S (1) $\rightarrow$ $\qquad$ $\mathrm{Fe}_{2} \mathrm{~S}_{3}(\mathrm{~s})$
9. Gases: in each of the following situations, the properties of a gas are changing. Indicate whether each property will increase, decrease or remain constant:

## Inflating a beach ball:

Pressure $\qquad$ Moles $\qquad$ Volume $\qquad$ Temperature $\qquad$

Propane tank valve is opened to grill a steak: (consider the gas inside the tank)
Pressure $\qquad$ Moles $\qquad$ Volume $\qquad$ Temperature $\qquad$
